WORK EXPERIENCE

The Home Depot Technology **May 2026 – Aug. 2026**
Full-Stack Software Engineering Intern *Atlanta, GA*

- Implemented AI-forward integration across internal and consumer-facing software using TypeScript and React to surface contextual insights and streamline operations.
- Built scalable full-stack features using React, TypeScript, and GraphQL to embed conversational and agentic capabilities into high-impact enterprise web applications.
- Integrated real-time data connections within a React frontend to support continuous data streaming for AI models, iterating rapidly to deliver intuitive user experiences.

Lockheed Martin **Apr. 2025 – May 2026**
Full-Stack Software Engineering Intern *Orlando, FL*

- Built a full-stack data ingestion and storage application using React and TypeScript to securely manage and index millions of rows of hardware telemetry data.
- Authored low-level C firmware to manage a real-time multimedia data processing pipeline for high-frame-rate camera sensors in demanding environments.
- Engineered custom embedded software and serial drivers to stream raw sensor telemetry and hardware metrics from embedded devices to a centralized platform.

Limbitless Solutions **Jan. 2025 – Mar. 2025**
Software Engineering Intern *Orlando, FL*

- Developed reliable IoT data transmission routines, scaling telemetry ingestion between embedded hardware and remote backend infrastructure.
- Built Golang backend services and TypeScript/React frontend features to support remote hardware monitoring, workflows, and actionable insights.

FINFROCK **May. 2023 – Aug. 2023**
Backend Software Engineering Intern *Apopka, FL*

- Engineered a secure backend infrastructure module using Golang to support authorization scaling for a proprietary enterprise platform.
- Programmed a scalable data-parsing pipeline to ingest large physical operational datasets, translating raw spatial coordinates into actionable user workflows.

EDUCATION

University of Central Florida **Aug. 2024 – May 2028**
Computer Engineering *Orlando, FL*

- **GPA: 3.7**; Burnett Honors Scholar, Provost Scholar

TECHNICAL SKILLS

- **Languages:** TypeScript, Golang, C++, C, JavaScript, Python, SQL, GraphQL
- **Frameworks & Libraries:** React, React Native, Node.js, GraphQL, LangChain, FreeRTOS
- **Tools & Platforms:** Linux, Git, Docker, GCP Vertex AI, REST APIs, CI/CD pipelines, IoT Platforms

PROJECTS

Volunteer Hub - Independent Project
Lead Developer

- Architected and deployed a full-stack platform using React, TypeScript, and GraphQL, streamlining administrative workflows and data ingestion.
- Implemented secure authentication and robust client-side validation to ensure highly reliable user experiences at scale.
- Utilized firebase to provide secure user account auth and provide credential validation between databases.
